

INOQ Agri

Charge IFP V1/11

Recultivation, Blending with seeds, Blending with fertilizer

High trickle ability
 High efficiency of water absorption
 Good grip at slope gradient
 May be used in organic farming in accordance with EC Commission Regulation 889/2008 Article 3 (4)

Endomycorrhizal Fungi (native strains, do not contain Genetically Modified Organisms (GMOs))		<i>Claroideoglomus etunicatum</i> (Becker & Gerd.) <i>Rhizophagus intraradices</i> (Schenck & Smith) <i>Claroideoglomus claroideum</i> (Schenck & Smith)
Mycorrhiza Units (per cm ³ substrate)		210
Mycorrhiza Effectiveness (increased growth [%] in standardized test)		40 ± 5
Carrier material		Vermiculite 1-2 mm
Specific weight [g/l]		390-450
pH		5,6
Application		Annual application near root system
Dosage	Blending with seeds	10 – 20 ml / 1000 corn
	Blending with fertilizer	10 – 12 l / t
	Spreading into planting hole	20 ml / plant (up to 12 cm pot) up to 100 ml / plant (up to 10 l pot)
	Existing plant formations	According to size of plant up to 100 ml / plant in drilling holes
	Surface treatment	up to 100 ml / m ²
Packaging		10 l bucket, 25 l PP-Bag 1000 l Big Bag
Storage		2 years, under cool and dry conditions
Health and safety information		No special precaution necessary Avoid breathing or ingestion Absence of phytopathogens proven (DNA multiscan®) Material Safety Data Sheet available
Tolerance of fungicides		proven
